

Database Connection

// Define Database Connection Parameters

```
package dao;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.SQLException;

public class DatabaseContext {
    private static Connection connection;

    private static final String URL =
"jdbc:mysql://127.0.0.1:3306/vehiclereservationdb";
    private static final String USER = "root";
    private static final String PASSWORD = "root";

    static {
        try {
            connection = DriverManager.getConnection(URL, USER, PASSWORD);
            System.out.println("☑ Connection Successful!");
        } catch (SQLException e) {
            throw new RuntimeException("✗ Database Connection Failed!", e);
        }
    }

    public static Connection getConnection() {
        return connection;
    }
}
```

// Test the Connection (Optional)

```
package main;
import dao.DatabaseContext;
import java.sql.Connection;
import java.sql.SQLException;

public class DatabaseTest {
    public Connection dbconn;
    public void connectDatabase() {
        try (Connection conn = DatabaseContext.getConnection()) {
            if (conn != null) {
```

```
        System.out.println("☑ Connection Successful!");
    }
} catch (SQLException e) {
    e.printStackTrace();
}
}
}
```

Main.java

```
DatabaseContext.getConnection();
```

<terminated> DatabaseTest [Java Application] C:\Users\WELCOME\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.f
☑ Connection Successful!
